SWAYCORE PLATFORM · FAMILY OF APPLICATIONS # SWAYcore ## Complete Product Features & Creative Direction **Recovered canon · 10 October 2026**

**Four distinct applications · One future universal movement engine**

This presentation records product-specific capabilities, user journeys, original UI/character references, artistic inspiration, release boundaries and the source evidence behind them. It is not an implementation PASS report.

*Established Build 108 UIX direction — original SWAY project reference; reference only, not a verified current build screenshot.*

**Platform:** `~/edenOS/Software Development/SWAYcore Platform/`
**Active app:** `SWAYcore Dance & Fitness`
**Engine extraction:** after successful and accepted flagship implementation.

---

## The application family

| Application | Role | State |
|---|---|---|
| **SWAYcore Dance & Fitness** | Consumer dance learning, training and creation | Active Alpha |
| **SWAYcore SWAYZ** | Choreographer and instructor creation/teaching | Established specification and source |
| **SWAYcore Kid Dancers** | Child-centered foundational learning | Established specification and source |
| **SWAYcore Studio Management** | Professional studio operations | Established specification and source |
| **Universal SWAYcore Engine/Core** | Reusable movement, music and pose technology | Future extraction |

**Explicit correction:** Older references to a separately named “SWAY — dedicated learning” are retained as historical research only, **not** presented as an established fifth standalone application.

# SWAYcore Dance & Fitness · Experience **MOVE · LEARN · TRAIN · CREATE · SHARE**

The native iPhone/iPad flagship is an integrated dance-teaching and fitness experience—not a static animated dancer, camera laboratory, generic metronome or video clip library. The core loop is **WATCH → COPY → MATCH → COMBO → SCORE → UNLOCK → DANCE**.

*SWAY UI target; authoritative creative layout reference — original SWAY project reference; reference only, not a verified current build screenshot.*

### Navigation and first-use experience

- **HOME:** recognizable full-size coach, start/resume session, personal goal/progress and direct pathways into dancing.
- **MOVES:** meaningful visual move library, style/difficulty, Learn, Practice and creation; no unsupported demo-only moves presented as working.
- **BEATS:** original rhythm and song selection with an accessible consumer music interface.
- **PROFILE:** your dancer, history, goals, Health/integrations, settings and planned features with honest labels.
- **Setup:** choose workout, music, exercise mode and options; **Calibration** owns the stage until READY if tracking selected.
- **Workout:** large articulated coach, readable current move/count and next action, minimal status, clear pause/resume.
- **Results:** actual progress, confidence, mastery, completed activity and next useful choices.

**Visual direction:** stage-dominant dark/near-black experience, violet/magenta/pink/cyan, readable distance-scale text, polished original characters, iPhone and iPad portrait/landscape. No developer diagnostic UI in consumer navigation.

# Dance & Fitness · Complete Movement System ### Library and composition The recovered core contains **26** moves: March, Step Touch, Hip Sway, Heel Dig, Knee Lift, Double Step, Grapevine, Arm Reach, V-Step, Side Tap, Box Step, Mambo Step, Cha-Cha Basic, Squat Pulse, Side Lunge, Cross Step, Body Roll, Dance Jack, Skater, Pivot Turn, Kick-Ball-Change, Salsa Basic, Jazz Square, Power Knee, Lateral Hop and Turning Grapevine.

**Content hierarchy:** Move → Variation → Combination → Routine → Workout/Session → Challenge → Program. **Mastery:** Discovered → Learning → Familiar → Mastered. Complexity (Simple through Expert) is not a substitute for intensity/accessibility.

## Learn and Practice

- **Eight-count choreography:** every selectable count maps to coherent pose/state and instruction.
- **Frame-continuous movement:** not screenshots or rigid pose cuts; visible animated transitions remain a separate acceptance gate.
- **Tempo:** user-adjustable practice reference, recovered **20–180 BPM** direction; same clock synchronizes count/pose/instructions.
- **Controls:** play, pause, resume, repeat, count-by-count, mirror, transitions, restart and next move where supported.
- **Camera OFF:** real animated follow-along remains fully usable; camera matching is optional enhancement, not required to learn.

## Workouts and modes

**Quick Dance · Dance · Learn Moves · Party · Challenge · Freestyle · Daily Dance · Endurance · Low Impact · Adaptive Workout.** Sessions target roughly 5–45 minutes, with user choice for duration, energy, complexity, style, small-space/low-impact and adapted movement. Automatic, By Song, Continuous Mix, By Routine, Manual and Repeat advancement are established concepts requiring real code acceptance. Do not award results after interrupted or unperformed activity.

# Dance & Fitness · Music, Tracking & Feedback ### SWAY Beats and connected audio - Built-in, **offline** generated percussion: kick, snare/clap, hi-hat and additional rhythm voices. - Recovered rhythm families: **Simple, Pop, House, Hip-Hop, Disco, Latin, Afro, Percussion, Rock, Minimal.** - Local/imported music analysis for tempo, phase, downbeat, bar and phrase; half-time interpretation cannot break phase. - Authorized **MusicKit/Apple Music** integration and playlists, automatic/in-order/shuffle, Shazam identification/alignment where supported; licensed tracks are referenced, not bundled into exported packs. - **One musical clock** drives beats → count → movement → coach demonstration → visual/voice cues → expected YOU pose → matching/scoring.

## Camera / YOU tracking and six-action calibration

**STEP INTO VIEW → WAVE LEFT → WAVE RIGHT → LIFT LEFT FOOT → LIFT RIGHT FOOT → JUMP → READY TO SWAY.** Tracking requires permission, acquisition, calibration and READY before countdown/workout progression. Before READY, do not start music progress, score, exhortation or elapsed workout time.

On-device Vision joints become a **graphical YOU avatar/overlay**, never a debug skeleton on the final stage. On loss or occlusion, confidence falls, cue **REPOSITION / STEP INTO VIEW**, continue session safely and reacquire. Ratings distinguish **MATCH / NOT MATCHED / UNKNOWN**: no camera or low confidence must not produce invented scores.

## Voice, feedback and accessibility

A shared CoachCue has consistent spoken/onscreen meaning and timing, adapted to instructor character. Voice options: Off / Minimal / Normal / Detailed. Praise depends on evidence, never just time elapsed. Accessibility includes VoiceOver, Dynamic Type where compatible, clear controls, contrast, reduced motion, low-impact and adaptive alternatives.

# Dance & Fitness · People, Avatar & Content ### Four roles that must stay distinct - **INSTRUCTOR:** the character identity, personality, appearance and teaching style. - **COACH:** the graphical articulated performance target demonstrating choreography. - **YOU:** a consent-based representation of user body pose/movement, derived on-device. - **YOUR DANCER:** the saved, custom-appearance avatar used in previews and dancing, sharing compatible rig/motion truth.

**Final coaching architecture: Lucia, Nandi, Thabo, Zuri, Kyle**. Initial Alpha production priority Lucia and YOUR DANCER, but not license to remove the final five-coach requirement.

*Recovered character direction reference — original SWAY project reference; reference only, not a verified current build screenshot.*

## YOUR DANCER Creator

Real visible functional customization of body/proportion, skin, face, hair style/color, garments/top/bottom, footwear, accessories where supported, large preview/rotation, persistence and actual workout appearance. The Sims is the user-directed reference for polish and practical creator experience, **not** licensed Sims characters or assets. Static fragments or unrelated skins cannot substitute for connected animation.

## Create, record and transfer

Create Move → capture/create pose/counts → edit → preview → save → library → learn/workout → combine → share. `.swaypack` must be versioned/validated, compatible across products, reject invalid or unauthorized assets and round-trip counts/poses/music references. Native iMessage/AirDrop/Files/Share Sheet needs no Community account. **Record Me / Record SWAY** requires explicit consent, playback and Photos/Files/Share destination verification.

# Dance & Fitness · Sessions, Health & Acceptance ### Membership and participation | Type | Recovered meaning | |---|---| | Individual | One dancer | | Dance Together | Two people | | Family / Household | Up to **six** eligible Apple Family Sharing members with independent private profiles | | SWAY Master | Separate professional/instructor-hosted larger sessions |

**Family Sharing** can confer eligible purchase rights but does **not** itself implement live synchronization or expose personal Camera/Health/progress data. Multi-device transport and StoreKit entitlements require actual tests. Only numerical pricing is undecided.

## Health, storage and offline

HealthKit is opt-in; privacy, revocation and errors are explicit. The Apple Watch companion is part of roadmap scope; do not advertise an implemented watch app. Bundled moves, Beat generation, animated instruction, local progress and portable packs remain useful without network sign-in. Local profile and preferences survive relaunch.

## Consumer acceptance journey

Fresh install → onboarding → Home → Moves → eight counts/tempo → Beats/music → YOUR DANCER customization → Create → export/import pack → Follow-Along → camera permission → six-step calibration → READY → countdown → synchronized coach/YOU/music/counts/voice/score → loss/reacquisition → pause/resume → recording → honest results → Profile/Health → relaunch/offline. Repeat on iPhone and iPad portrait/landscape.

**Current evidence is bounded:** pose parity at 12,610 samples and protected tests in earlier R2; full connected character motion, all app flows and real-device physical quality **not accepted**. Historical visuals and older richer working movement remain recovery references; do not promote build solely from compilation.

# SWAYcore SWAYZ · Full Identity & Inspiration **CREATE · CHOREOGRAPH · TEACH · INSPIRE**

**Professional dance-instructor and choreography creation application**, not a studio booking or billing service.

## The original inspiration — preserve it

Recovered original handoff explicitly connects **SWAYZ** to the **Patrick Swayze / Dirty Dancing instructor archetype**: confident, expressive, approachable human teaching; demonstrative partner work; storytelling through movement; rehearsal and choreography that feels genuinely dance-led. This informs the product's **identity, teaching personality, visual presentation and interaction style**, not merely a product name.

**Copyright boundary:** the inspiration is not permission to copy the actor's likeness, the film, its characters, frames, costumes or soundtrack. Build original human instructors and original artwork with the same aspirational *feeling* of charismatic dance teaching.

## Professional visual/interaction design

Dark violet/pink/cyan stage and clearly rendered instructor, move cards and rich previews. Main focus: **COACH → current move/count/progression → next move**. On iPad, a large performance stage and directly editable choreography timeline take priority over dashboards. Music waveform/beat phrases support choreography but do not overwhelm the body and movement.

*Existing SWAY design reference for family visual continuity — original SWAY project reference; reference only, not a verified current build screenshot.*

**Teaching promise:** watch an instructor demonstrate the movement clearly, manipulate/inspect the exact musical count and transition, rehearse at controllable tempo, then teach/export that exact choreography.

# SWAYZ · Professional Feature Catalogue ### Choreography authoring - Create and edit new Moves using the canonical shared movement definition; count-specific pose and directional state. - Author **1–8 counts**, holds, turns, left/right mirror, repetitions, speed and transitions; inspect resulting articulated animation. - Compose **Variations, Combinations, Routines** and sequences from reusable, editable moves without duplicate skeleton or timing logic. - Support cue placement, tempo, musical phrasing, beat/grid alignment and rehearsable sections. - Timeline manipulation for arranging move blocks/counts, visual transitions and structure. Current count and next steps remain clear during editing and preview. - Formations/performer positions may be metadata when supported; unverified full partner formations are **not** asserted as implemented.

## Instructor-led rehearsal and teaching

- Stage shows a production-quality animated human COACH, facing/mirroring as appropriate and performing real count-synchronized motion.
- Preview choreography with music or the offline SWAY clock, slow down to teach hard counts, pause/repeat/continue without pose desynchronization.
- Place and rehearse voice/visual instructor cues; use consistent reference poses and character interpretation across SWAYZ and Dance & Fitness.
- Optional camera pose/movement capture for professional Create Move authoring, with consent, confidence and edit/confirm before storing.
- Keep instructor personality distinct from movement facts; every instructor uses the **same** canonical choreography data.

## Local library / portability

- Save, rename, version, inspect, revise and restore local choreography; protect authored provenance and licensing.
- Import/export validated portable **.swaypack** move/routine definitions; share via standard OS mechanisms.
- End-to-end reference: **SWAYZ author → save → export → import in Dance & Fitness → Learn → Practice/Workout** with identical timing, direction, poses and cues.
- All essential edit/rehearse/export flows useful without permanent Internet.

## Professional acceptance

Creation, count editing, preview, music sync, saved versions and cross-app interchange must be demonstrated on actual native runtime. Recovered documents **do not** prove completed code, a published SWAYZ binary, a full student-assignment database or functioning formation tools.

# SWAYZ · Workflow Presentation ### From an idea to a teachable routine

**01 — Select/Create movement**
Start with an original or reused move, choose the instructor and movement direction. Begin from SWAYcore Movement Definition rather than an isolated video clip.

**02 — Build exact counts**
Set the poses and transitions on beats 1–8. Inspect mirrored/right-left interpretations and how connected body parts articulate.

**03 — Arrange the routine**
Combine multiple moves on an editable musical phrase/timeline; add counts, transitions, repetitions and intended progression.

**04 — Add coaching**
Define useful voice/visual guidance and instructor cues. Align speech and visual arrows with the one musical clock; avoid contradictory cue text and animation.

**05 — Preview & rehearse**
An expressive human instructor demonstrates the whole routine, not a static cutout. Play, pause, loop, change tempo, check beat grid and transitions.

**06 — Publish locally/share**
Save/version the authored choreography, export an interoperable `.swaypack` and pass it into Dance & Fitness Learn and Workout unchanged.

## Ownership boundary

**SWAYZ** = professional choreography/teaching. **Studio Management** = schedules, membership, attendance, business operations. Integration can reference choreography/class material; neither product duplicates the engine or gains unauthorized access to unrelated personal information.

## Production and acceptance requirements

Use an original compatible humanoid, real animation clips and truthful stage preview. Original source references require Mac-hosted one-click builders with Xcode and Blender preflight, test/asset validation, package verification and physical acceptance. Current recovered SWAYZ source and specification are **not equivalent to a production accepted app**.

# SWAYcore Kid Dancers · Feature Presentation **FUN · CONFIDENCE · CREATIVITY · FOUNDATIONS**

## Product and audience

A separately designed child's first dance and movement-learning experience; playful, visual, safe, understandable and encouraging. Do not copy adult fitness/professional administration screens with child colors.

## Learner experience

- Entry into familiar, large, readable visual lessons and age-appropriate original coach presentation.
- Short **WATCH → COPY → TRY AGAIN** instruction with one coherent shared beat/count/motion contract.
- Familiar rhythms and simple choreography; optional slower practice/adaptations that keep the movement definition compatible.
- Focus on participation, confidence, coordination, creativity and attainable foundational skill rather than adult fitness metrics.
- Encourage effort and improvement; feedback must reflect real movement if tracking is opted into, with no fabricated scores if no camera.
- Clear pause, leave lesson, progress and return later; preserve age-suitable local progress.

## Visual and music

Colorful yet cohesive SWAYcore graphical identity, larger instructor and tap targets, simple progress, minimal cognitive load, accessible fonts, generated offline Beats and bundled routines. Original character rig may be shared technologically but coach persona/wording is separately child-appropriate.

## Parent, consent and protection

On-device Vision by preference, video frames transient unless a user explicitly records and has permission; camera-off Follow-Along continues fully. No auto-public child profile, no default contact with adult Community, no hidden recording or data export. Parent-aware safeguards, offline preference, accessible alternatives. **Age bands, complete guardian accounts and reward economy are not recovered as accepted canon; do not invent them.**

## Acceptance journey

Choose child-friendly session → see animated instructor → follow visually/offline → optionally permit truthful tracking → receive understandable feedback → safely pause/restart → review earned progress. Explicit privacy/safeguarding review before launch. Native compilation and physical child-experience acceptance remain UNKNOWN.

# SWAYcore Studio Management · Feature Presentation **INSTRUCT · MANAGE · GROW · SUCCEED**

## Product identity and audience

A dedicated **dance studio business/operations** product for owners, administrators, instructors and professional organizations. Historical name “Studio Instructor” belongs to this lineage, not a second duplicate product. Studio Management must **not** be merged with SWAYZ choreography authoring.

## Scheduling and classes

- Studio/venue organization; calendar and recurring classes; edit/reschedule/cancel session.
- Assign instructor/staff, available room/location and class capacity; maintain rosters.
- Today's schedule and meaningful exceptions (unassigned teacher, unconfirmed booking, full roster) in a calm professional layout rather than giant consumer workout cards.

## Students, staff and attendance

- Enroll, move or withdraw a member/student from a roster, preserving history.
- Instructor/staff roles and assignments; view relevant classes subject to privacy boundaries.
- Check-in and attendance history, with durable local storage and recovery.

## Memberships, billing and administration

- Manage membership statuses/lifecycles and basic plan records.
- Invoice/charge/payment records, outstanding states and appropriate summaries.
- Basic studio administrative and finance reporting; do not invent a specific canonical KPI set, gateway or multi-tenant server not supported by recovered material.

## UI and platform

Native **iPad/macOS** professional navigation: schedules, rosters, details, keyboard/pointer support, local-first durable data. Windows/Linux delivery previously requested, but cross-platform implementation technique remains unverified and must be proven from a Mac-hosted build process. Choreography classes may link to SWAYZ content references.

## Acceptance journey

Create class/recurrence → assign instructor → enroll student → inspect capacity/roster → record attendance → manage membership → record invoice/payment → check summary → quit/relaunch with data intact. No public student/financial data in community. Current app shipping and payment integration UNKNOWN.

# SWAYcore Platform · Reusable Contracts ### Sequence — flagship first, then universal engine The user explicitly requires the platform directory to contain **SWAYcore Dance & Fitness** as the working app. It must be successfully implemented and physically accepted before extracting a reusable universal SWAYcore Engine/Core. Existing recovered SWAYcoreKit and active R2 engine are source evidence, not an already finished SDK.

### Common movement data

- Single authoritative **Movement Definition** for move/variation/combination/routine/experience, mirrored pose, direction, counts, transitions, provenance and version.
- Compatible humanoid rig contract (**23-joint SWAYHumanoid-v1** historical structural baseline), original production-grade articulation and scalable output.
- Musical clock and phrase-aware progression: audio tempo/phase → bar/count → instructor COACH → graphical YOU comparison → confidence/scoring → progress/results.
- No separate choreography engine for video previews, SWAYZ, Kids, consumer creator or community packs.
- Offline-first and optional platform adapters for Vision, MusicKit, HealthKit, recording and Apple Family Sharing rights where relevant.
- Versioned `.swaypack` importer/exporter validates structure, type, resource licenses and backward compatibility before modifying local libraries.

### Longer-range domain ideas, not declared new apps

Yoga (holds, posture/breath); Tai Chi (balance, flow); martial arts (stance, direction, trajectory); general fitness (repetitions, sets, form). These need new domain-specific safety, progression and acceptance; **no invented product names**.

### Official optional Community

Pseudonymous public identity, original creator uploads, discovery, favorites/follows, versioned content, challenges, moderation, report/block/unpublish, child safeguarding and safe data deletion. A live backend is not proven; local move libraries and sharing must survive offline.

# Authority, Recovery & What Is Not Yet Verified ### Canonical locations **Platform:** `~/edenOS/Software Development/SWAYcore Platform/` **Active app:** `SWAYcore Dance & Fitness/R2/` **Product briefs:** `SWAYcore Dance & Fitness/SWAY/RecoveredFamily_20261003/Docs/Spec/` **Full recovered family specs:** `SWAYcore Dance & Fitness/SWAY/Specifications/` **UI and character references:** `SWAYcore Dance & Fitness/R2/App/DesignReferences/`.

## Backups are separate

The established `~/edenOS/Backups/` directory governs backups. Existing historical recovery snapshots under `~/edenOS/AppDev/#App Backups/Projects/SWAYcore/` must be reconciled under backup rules without deleting or silently changing verified archives. **Do not put backups into the active product folder.**

## Earlier verified evidence (not whole-product acceptance)

R2 recovered test evidence includes 26-move pose parity across 12,610 samples and protected static/gate passes, but real user-visible animation and app journeys remain separately unverified. Oct 9 visual avatar candidate is a **render reference**; motion regressed compared with earlier reference. Older build 143/147/149/151/152/153 remain historical evidence, build 148 rejected. Current project LKG remains NONE.

## Provenance

This presentation's product requirements come from original recovered five-product handoffs, 2026-10-10 family and consumer specifications, original SWAY UI references, and the user's later clarifications: four-app family; SWAYZ teaching inspiration; family six-member entitlement; platform folder; universal engine after successful flagship; business choices settled except numeric pricing. Earlier blanket two-person claims, incorrectly proposed standalone product names and a generic reimagined SWAYZ are not accepted canon.

**Evidence gate:** Authority → Reference → Baseline → Implement → Static/Environment → Regression → Package → Package Verify → Physical iPhone/iPad → Promote. **UNKNOWN ≠ PASS.**
